Professional Summary

Frontend-focused Software Engineer who builds production React, Next.js and TypeScript applications, from component design and state management to API integration and release automation. Experienced with Redux Toolkit/RTK Query, TanStack Query, Apollo Client, Tailwind CSS, Radix/shadcn UI, Ionic React and Capacitor, with enough backend depth (Node.js, FastAPI, SQL) to work across the stack.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, Python, SQL
Frameworks: React, Next.js (App Router), Ionic React, Capacitor, React Hooks
State & Data: Redux Toolkit, RTK Query, TanStack Query, Apollo Client (GraphQL), REST APIs, WebSockets
UI & Styling: Tailwind CSS, Radix UI, shadcn/ui, Responsive Design, Accessible Components
Testing & Quality: Jest, React Testing Library, PyTest, ESLint, Feature Flags
Backend: Node.js, Express.js, FastAPI, PostgreSQL, SQL Server, Redis
Tools & Cloud: Git, GitHub Actions, CI/CD, Vercel, AWS (Cognito, S3, Lambda), Docker

Experience

Agile Receivables Remote
Full-Stack Developer *Oct 2026 – Present*

- Built the patient-reply review screens for a healthcare collections platform in Next.js and TypeScript: a tabbed review queue, a slide-over review panel, live count cards and an opt-out override dialog, using shadcn/Radix UI and Tailwind CSS behind a feature flag.
- Connected the screens to FastAPI with RTK Query and tag-based cache invalidation so queues, counts and customer pages refresh after each action; also built the spaCy engine (98% accuracy) that labels those replies.

Primus Softech Solutions LLP New Delhi, India
Full-Stack Developer *Jan 2026 – Oct 2026*

- Built a production cross-platform app (Ionic React, TypeScript, Capacitor) for real-time monitoring and control of AC, lighting, CCTV, fault diagnostics and emergency alarms on Vande Bharat trainsets.
- Automated Android build, signing, versioning and deployment with Capacitor, Gradle and GitHub Actions; built the Node.js/Express APIs and SQL Server queries the app consumes.

Infosys Ltd. Bengaluru / Remote
Specialist Programmer *Nov 2024 – Nov 2025*

- Developed Python/Django/Flask services and REST APIs for an enterprise RAG platform, owning API contracts and PostgreSQL/MySQL schema design.
- Built hybrid keyword + vector search and integrated LLM answers with citation-backed document retrieval; worked with product and QA on delivery.

Selected Projects

Sprintly | *Next.js, React, Tailwind CSS, Socket.io, Node.js, PostgreSQL* | Live Demo

- Built a Jira/Linear-style project management app with drag-and-drop kanban boards, comments, labels, full-text search and role-based access, in a Turborepo monorepo deployed on Vercel.
- Added real-time updates through a Socket.io service fed by Redis pub/sub, authenticated per session with short-lived JWTs.

CloudVault Dashboard | *React, TypeScript, TanStack Query, Apollo Client, Node.js* | GitHub

- Built a B2B project dashboard using TanStack Query for REST caching and Apollo Client for GraphQL, with automatic token refresh and retry on 401, backed by four-tier RBAC and 18 tests.

Sentinel | *React, Express, MongoDB, Docker, LLMs* | GitHub

- Built an AI code-security auditor where users paste code or connect a GitHub repo to get CWE-classified findings, refactoring suggestions and code-health scores tracked over time.

Education

Guru Gobind Singh Indraprastha University New Delhi, India
B.Tech, Computer Science *2020 – 2024*
