Professional Summary

Frontend Engineer who builds production React and TypeScript applications and goes deep on the hard parts of the browser: real-time collaboration with CRDTs, virtualised rendering for large datasets, rich-text editing and accessible components on the WAI-ARIA patterns. Comfortable across the stack (Node.js, FastAPI, SQL) when a feature needs it.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, Python, SQL
Frameworks: React, Next.js (App Router), Ionic React, Capacitor, Vite
State & Data: Redux Toolkit, RTK Query, TanStack Query, Apollo Client (GraphQL), REST, WebSockets, Yjs (CRDTs)
Browser & UI: Canvas 2D, Web Workers, IndexedDB, Selection API, Tailwind CSS, Radix UI, shadcn/ui, WAI-ARIA
Testing & Quality: Vitest, Jest, React Testing Library, axe-core, ESLint
Backend: Node.js, Express.js, FastAPI, PostgreSQL, SQL Server, Redis
Tools & Cloud: Git, GitHub Actions, CI/CD, Vercel, AWS (Cognito, S3, Lambda), Docker

Experience

Primus Softech Solutions LLP — New Delhi, India
Full-Stack Developer — *Jan 2026 – Present*

- Built a production cross-platform app (Ionic React, TypeScript, Capacitor) for real-time monitoring and control of AC, lighting, CCTV, fault diagnostics and emergency alarms on Vande Bharat trainsets.
- Automated Android build, signing, versioning and deployment with Capacitor, Gradle and GitHub Actions; built the Node.js/Express APIs and SQL Server queries the app consumes.

Infosys Ltd. — Bengaluru / Remote
Specialist Programmer — *Nov 2024 – Nov 2025*

- Developed Python/Django/Flask services and REST APIs for an enterprise RAG platform, owning API contracts and PostgreSQL/MySQL schema design.
- Built hybrid keyword + vector search and integrated LLM answers with citation-backed document retrieval; worked with product and QA on delivery.

Selected Projects

Inkboard | *React, TypeScript, Canvas 2D, Yjs, IndexedDB* | Live · Code

- Built a multiplayer whiteboard (shapes, pressure-sensitive ink, text, sticky notes) on a custom Canvas 2D renderer with DPR scaling, viewport culling and zoom at the cursor.
- Synced edits through Yjs CRDTs with a BroadcastChannel provider I wrote, adding live cursors, shared selections and per-user undo; persisted offline in IndexedDB.

Gridline | *React, TypeScript, Web Workers, Tailwind CSS* | Live · Code

- Built a 100,000-row data grid with no table library: row and column virtualisation keep about 300 of 1.2 million cells in the DOM, scrolling at 60 fps.
- Moved filtering and multi-sort into a Web Worker returning a transferable Int32Array; added an ARIA keyboard grid, inline editing and CSV export.

Stanza | *React, TypeScript, contentEditable, Selection API* | Live · Code

- Built a Notion-style block editor without ProseMirror or Slate: slash commands, markdown shortcuts, drag to reorder, and undo that works across block splits and merges.
- Sanitised paste to an allow-list and added Markdown import/export; the DOM is never rewritten while typing, so the caret never jumps.

Halo UI | *React, TypeScript, WAI-ARIA, Testing Library, axe-core* | Live · Code

- Built an accessible component library of nine components (Dialog, Menu, Combobox, Tabs, Toast and more) with focus management, typeahead, CSS-variable theming and a docs site; 7 kB gzipped, covered by 19 behaviour and axe tests.

Education

Guru Gobind Singh Indraprastha University — New Delhi, India
B.Tech, Computer Science — *2020 – 2024*
